Lead / Staff Software Engineer – Distributed & Scalable Systems with 8+ years of experience designing and scaling high-throughput commerce platforms and AI-native SaaS systems. Proven technical leader with end-to-end ownership of architecture, reliability, cloud migrations, payments, security, and early-stage product-to-revenue execution.

Experience

Keychain — Senior Backend Engineer / Tech Lead — AI ERP & Supply Chain SaaS (Keychain-OS, Keychain360) Feb 2025 – Present

- Founding backend lead for **Keychain-OS**, a cloud-native ERP for manufacturers, and **Keychain360**, a brand-facing SaaS for Supply Chain Visibility, PLM, and end-to-end ingredient traceability.
- Architected multi-tenant backend platform supporting PLM workflows, search, analytics, RBAC, audit trails, and LLM-integrated operational workflows.
- Designed and shipped **enterprise SSO and identity federation (SAML + OAuth)** for brand onboarding, integrating role-based access control, audit logging, and compliance workflows.
- Built AI-assisted operational workflows for product onboarding, compliance automation, supplier intelligence, and operational decision support.
- Owned technical roadmap and delivery for a 7-engineer team; responsible for system design, scalability, reliability, hiring, and engineering quality bar.
- Contributed to early enterprise adoption and customer onboarding across paid and freemium brands while supporting rapid MVP iteration and product-market fit validation.
- Collaborated across distributed product, engineering, and operations teams in India and US time zones.

Meesho — SDE3 (Jul'22–Feb'25), SDE2 (Mar'21–Jun'22) Mar 2021 – Feb 2025

- Tech lead for large-scale checkout and cart systems handling **15M+ orders/day peak** at **2K RPS** and **10M DAU** during mega-sale events with **99.9%+ uptime**.
- Built and scaled ranking and personalization infrastructure on Dragonfly (Redis-compatible) handling **3M+ IOPS**; led migration reducing caching cost by **90%**, saving **\$360K annually**.
- Architected distributed platforms: Redis-based Cart (200K+ concurrent carts), Twitter Snowflake for global order-ID generation, and Multi-Supplier Cart supporting 50+ sellers.
- Led Prepaid Platform pod (4 engineers); increased prepaid share from **5% to 20%** via payment orchestration, checkout redesign, and bank-offer integrations.
- Owned zero-downtime migration of core transaction services from **EC2 → EKS → GKE** (5+ microservices).
- Drove ML ranking initiatives (Explore, Search, PDP) with data science and product teams, improving CTR and monetization.
- On-call lead and war-room incident commander during sale days; owned SLOs, runbooks, mitigation strategies, and post-incident reviews.

Milkbasket — SDE2, SDE1

Sep 2019 – Mar 2021

- Re-architected payment platform from PHP monolith to Java microservices; integrated Juspay, AutoPay, wallets, refunds, and offer orchestration.
- Optimized high-traffic APIs, reducing p99 latency by **50%** and batch-job runtime from 1 hour to 2 minutes.
- Rebuilt Super-Recharge and core commerce workflows, reducing production issues from **1000+ to <10** and significantly improving operational stability.
- Built revenue features (Membership, Value Pass, Impulse Buy) increasing basket size and conversion.

ShopClues — Software Engineer

Sep 2018 – Sep 2019

- Developed merchant billing, settlement, and reporting systems including Net Payout, Express Payout, Wallet, and Fulfillment Policy engines.
- Built high-volume APIs for reseller services and billing estimation supporting marketplace scale.

Leadership & Organizational Impact

- Led and mentored engineers across Meesho and Keychain; **5 mentees promoted** across two cycles (SDE1→SDE2, SDE2→SDE3, QA→SDE).
- Conducted **100+ technical interviews**; introduced machine-coding rounds and created company-wide question bank and hiring bar.
- Tech lead for cross-org programs (Multi-Supplier Cart, Ranking, Payments, ERP, Keychain360).
- Owned on-call rotations, war-room command, and postmortem processes for high-severity incidents.

Architecture & Systems at Scale

- Distributed Systems: High-throughput checkout, carts, payments, ranking, and recommendation platforms.
- AI Platforms: LLM-integrated workflow systems, AI ERP workflows, data ingestion, search, analytics, and compliance automation.
- Cloud & Reliability: Kubernetes, multi-service migrations, SLOs, zero-downtime deployments, capacity planning, and cost optimization.
- Security & Compliance: Multi-tenant SaaS, SAML/OAuth SSO, RBAC, audit trails, SOC2 readiness.

Education

Indian Institute of Information Technology, Kota — B.Tech in Computer Science

2014 – 2018

GPA: 7.95 / 10

Technology

Languages: Java, Go, Python, SQL

Platforms: Distributed Systems, Microservices, LLM-integrated Platforms, High-Scale Checkout & Payments, Ranking Systems

Infra: Kubernetes, Docker, AWS, GCP, Redis/Dragonfly, Kafka, gRPC, MySQL, PostgreSQL, MongoDB, Elasticsearch

Practices: System Design, TDD, Cloud Migrations, High Availability, Security & Compliance, Event-driven systems
